

HP500 Series

High Pressure Popoff and Inline Relief Valves 150 to 575 psig (10 – 40 bar)

Inline version

Features

| Very accurate cracking pressure | |
|---|--|
| Zero leakage up to 95% of cracking pressure | |
| 100% seat leakage tested | |
| Tamper-proof adjustment | |
| Applications | |
| System overpressure protection | |
| Storage tanks | |
| Freon [®] recovery systems | |
| Medical equipment | |
| Refrigeration & heating equipment | |
| Measuring & dispensing pumps | |
| Communications equipment | |
| Process control instruments | |
| R & D pilot plants | |
| Technical Data | |
| Body Construction Materials | Brass, 316 stainless steel |
| 0-ring Materials | Buna N, ethylene propylene, neoprene, silicone, and Viton [®] |
| Spring Material | 17-7 PH stainless steel |
| Poppet | Brass, 316 stainless steel |
| Shroud | Brass, 316 stainless steel |
| Operating Pressure | • ¼″ pipe: 150 to 575 psig (10 to 40 bar) |
| Tanana sa tanana Dana sa | • $\frac{1}{2}$ pipe: 150 to 450 psig (10 to 31 bar) |
| lemperature kange | $-05 + 10 + 350^{\circ} + (-54^{\circ} + 10 + 177^{\circ} + 1)$ |
| | Order" |
| Connection Sizes | 1/4" to 1/2" male and female pipe |

How it Works

the poppet and prevents leakage to 95% of

stop, on the low pressure side, supports the spring load and prevents seal deformations.

the cracking pressure. The metal-to-metal

The specially-designed poppet seals on the elastomeric O-ring. The increasing pressure within the valve seals more tightly against

Open

The excess pressure is vented instantly when the system pressure overcomes the spring force and opens the poppet. Large flow passages, at the inlet and at the poppet opening, assure minimum pressure rise.

Reseating

Repeated, positive reseating occurs at better than 90% of the cracking pressure when the spring action retracts the poppet, reestablishing the seal between the elastomeric O-ring and the poppet shoulder.

Circle Seal Controls

2301 Wardlow Circle, Corona, CA 92880 Phone (951) 270-6200 Fax (951) 270-6201 www.circle-seal.com

HP500 Series

* Maximum cracking pressure is 450 psig for ½" valve sizes.

† For PED applications, brass bodies are limited to a maximum temperature use of +100° F (+38° C)

Please consult your Circle Seal Controls Distributor or our factory for information on special connections, materials, sizes, o-rings, operating pressures and temperature ranges.

Cracking Pressure

Tolerance: ±5%

Initial crack may be higher than cracking pressure tolerance due to inherent characteristics of seals.

Flow at cracking pressure for elastomeric seals is 5cc/min.

Leakage: Ascending pressure 0 up to 95% of cracking pressure

Reseal pressure: 90% of cracking pressure

Leakage at reseal pressure: Zero

For Your Safety

It is solely the responsibility of the system designer and user to select products suitable for their specific application requirements and to ensure proper installation, operation, and maintenance of these products. Material compatibility, product ratings and application details should be considered in the selection. Improper selection or use of products described herein can cause personal injury or property damage.
